

OceanManager introduces mAuditor.

mAuditor is an automated compliance auditing and surveying software. It is a cloud-based, cross-device, multi-platform, mobile and web solution that can be deployed in the field on smartphones and tablets, moreover, it can be operated both online and offline. This cost-effective software simplifies and streamlines the tedious, complex and time intensive audit process for both auditors and vessel owners.

✔ Checklist

Smart checklist Pre-configured with embedded rules, alerts and logic and tailored for vessel particulars. Auditor always works with the latest version and recorded data is shared live.

✔ Machine Learning/AI

AI/Machine learning engine recognizes patterns and recommends areas to improve across the fleet and highlight areas in a checklist to pay attention.

✔ Analytics

Visually appealing graphs and charts provide insights across audits and vessels. Share data anonymously and benchmark with other similar vessels.

✔ Media

Enrich the checklist with photos, audio, audio and video recordings captured during field work. Use the media in reports, create training content and share in media gallery.

✔ Library

Access private and public libraries of checklist, audits and surveys. Work with professionally developed checklists complete with references and guidance.

✔ Reports

Generate compelling reports using standardized and custom templates. Quick reports available to share and of audit. Completed report available for print, export and sharing.

OceanManager is a maritime software solutions company, established over a decade ago in California, USA providing Fleet Management and Operational Intelligence software products, along with other bespoke services for Technical Fleet Management, that help Ship Owners and Managers operate their vessels more safely and efficiently. Our software is currently in use on more than 1200 vessels worldwide.

Offices: USA - Greece - Singapore - India
