PLANNED MAINTENANCE

CREW MANAGEMENT & PAYROLL

SAFETY

PROCUREMENT

FINANCIAL INTEGRATION

OceanManager introduces vesFMS.

vesFMS is a complete fleet management software designed to improve the effectiveness of and streamline vessel maintenance. vesFMS provides an easy tool for reporting defects, breakdowns and applying preventive actions in the system. The system describes all the important information which can be readily exchanged with the home office on actions to be taken. The system also has the ability to attach relevant documentation, such as drawings and specifications.

✔ Overview screen with powerful filtering
✔ Maintenance Dashboard
✔ Defect Reports
✔ Crew & Payroll System

✔ Planning Board for maintenance routines
✔ Counters for machinery operation
✔ Maintenance Log

vesFMS also contains a Crew Management and Payroll module, which offers an overview of both active and unassigned crew, all required documentation, contracts, and certificates. Our crew management software handles your resource planning and payroll. Users can optimally plan crew for their vessels, make intelligent use of their crewing pools and ensure compliance with the required regulations.

Simple and reliable, **vesFMS** Crew Management and Payroll module helps companies remain competitive and in compliance with various regulations in the maritime industry. It can function either as part of an integrated suite or a standalone application.

OceanManager is a maritime software solutions company, established over a decade ago in California, USA providing Fleet Management and Operational Intelligence software products, along with other bespoke services for Technical Fleet Management, that help Ship Owners and Managers operate their vessels more safely and efficiently. Our software is currently in use on more than 1200 vessels worldwide.

Offices: USA - Greece - Singapore - India
