

OceanManager introduces MSMP.

OceanManager Inc. digitalizes Mooring System Management Plans.

Statistics from the European Harbour Masters' Committee show that 95 percent of personal injury incidents are caused by ropes and wires, and 60 percent of these injuries happen during mooring operations.

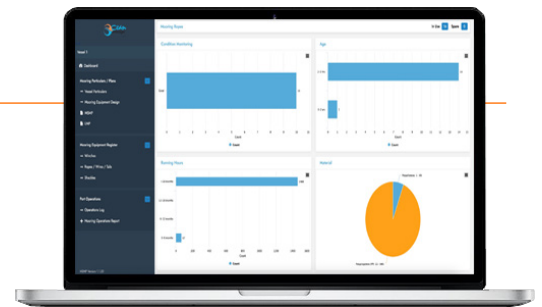

In an effort to bring these numbers down, central mooring rules and regulations are being amended and updated. In 2018, the fourth edition of the Mooring Equipment Guidelines (MEG4) introduced the Mooring System Management Plan (MSMP) for tankers. As in everything, technology has advanced in that field as well, with the development of various solutions, like for example “smart ropes”, that use sensors to advise the current condition of the mooring equipment.

This however still requires to be monitored and properly maintained as well.

OceanManager's MSMP system, does just that! By using a very easy web platform and mobile app, the mariners can now monitor the current condition and “running hours” of the mooring equipment, paperless, keeping themselves and the office properly informed, ensuring less incidents, reduced costs and more importantly minimise life threatening accidents.

OceanManager's mission, through MSMP and all our solutions, is to provide you actionable information for data driven decisions, and help you achieve:

- ✓ Compliance
- ✓ Safety
- ✓ Cost Efficiency

OceanManager is a maritime software solutions company, established over a decade ago in California, USA providing Fleet Management and Operational Intelligence software products, along with other bespoke services for Technical Fleet Management, that help Ship Owners and Managers operate their vessels more safely and efficiently. Our software is currently in use on more than 1200 vessels worldwide.

Offices: USA - Greece - Singapore - India
