VESRIM
Vessel Information Manager

OceanManager introduces SeaRM360.

The world moves fast, and shipping is no different. Being able to pivot and respond to changing market conditions is how a company gains a competitive edge. Pivoting is impossible if you are not aware that the business environment is changing. SeaRM360 is OceanManager's analytics suite designed to provide top management an integrated view of their entire fleet through our Business Intelligence platform BIOME, vessel tracking module VesTrak and vessel information manager VesRIM.

✔ BIOME

Our flagship analytics and Big Data platform. BIOME integrates data from all sources that generate data related to a fleet and presents them with simple analytics and Key Performance Indicators. Get a high level overview of your fleet's performance, or drill down into one particular statistic to get detailed reports.

✔ VesTrak

Our state of the art vessel tracking software that provides location based decision support for fleet management. Know at a glance where every vessel of your fleet is, where they are going, what they weather is like on the route and be able to respond in real time to changing conditions at sea.

✔ VesRIM

The smart vessel information manager that fits in the palm of your hand. VesRIM collects all vessel information and relationships, including vessel particulars, location, related contacts, and analytics, and presents them in a simple to use app.

OceanManager is a maritime software solutions company, established over 10 years ago in California, USA providing Fleet Management and Operational Intelligence software products, along with other bespoke services for Technical Management, that help Ship Owners and Managers operate their vessels more safely and efficiently. Our software is currently in use on approximately 1200 vessels worldwide.
